BEHANCE

I Achievements

- **Bachelor of Architecture**, total of credit hours **170**.
GPA- **3.90** out of **4.00**
- **AU Honors Assembly 2022** - Bronze medal.
- **Cultural Center** project shared on **Dezeen** magazine.
<https://www.dezeen.com/2023/01/20/ajman-university-architecture-student-projects-dezeen-schoolshows/>
- Participated in **Venice Biennale** of Architecture competition.
- Participated in **The Excellence and Creative Engineering Award**.

II Certificates

- Certificate of **Best intern at Dar Al Omran** company.
- **Autodesk** Certified Professional with **honor: Revit** for Architectural Design Exam Prep by **Coursera**.
- **Peer Tutor** Training Program.
- Get Started with **Adobe Illustrator** by **Coursera**.
- Completed **Dynamics mutations GSD 7.0 workshop** by **Designmorphine**.
- Completed **Introduction to Computational Design using Autodesk Dynamo** by **Digital futures**.
- Completed **AI-Generated Design Explorations workshop** by **Digital futures**.

LOCATION AJMAN

The proposed architectural concept is an innovative and contemporary design for a 15-story student hotel located in Ajman, United Arab Emirates. The aim of this concept is to create a dynamic and inspiring living environment that caters specifically to the needs and preferences of students. The design integrates functionality, sustainability, and aesthetic appeal, providing a comfortable and stimulating atmosphere for student residents.

3D AXONOMETRIC SECTIONS

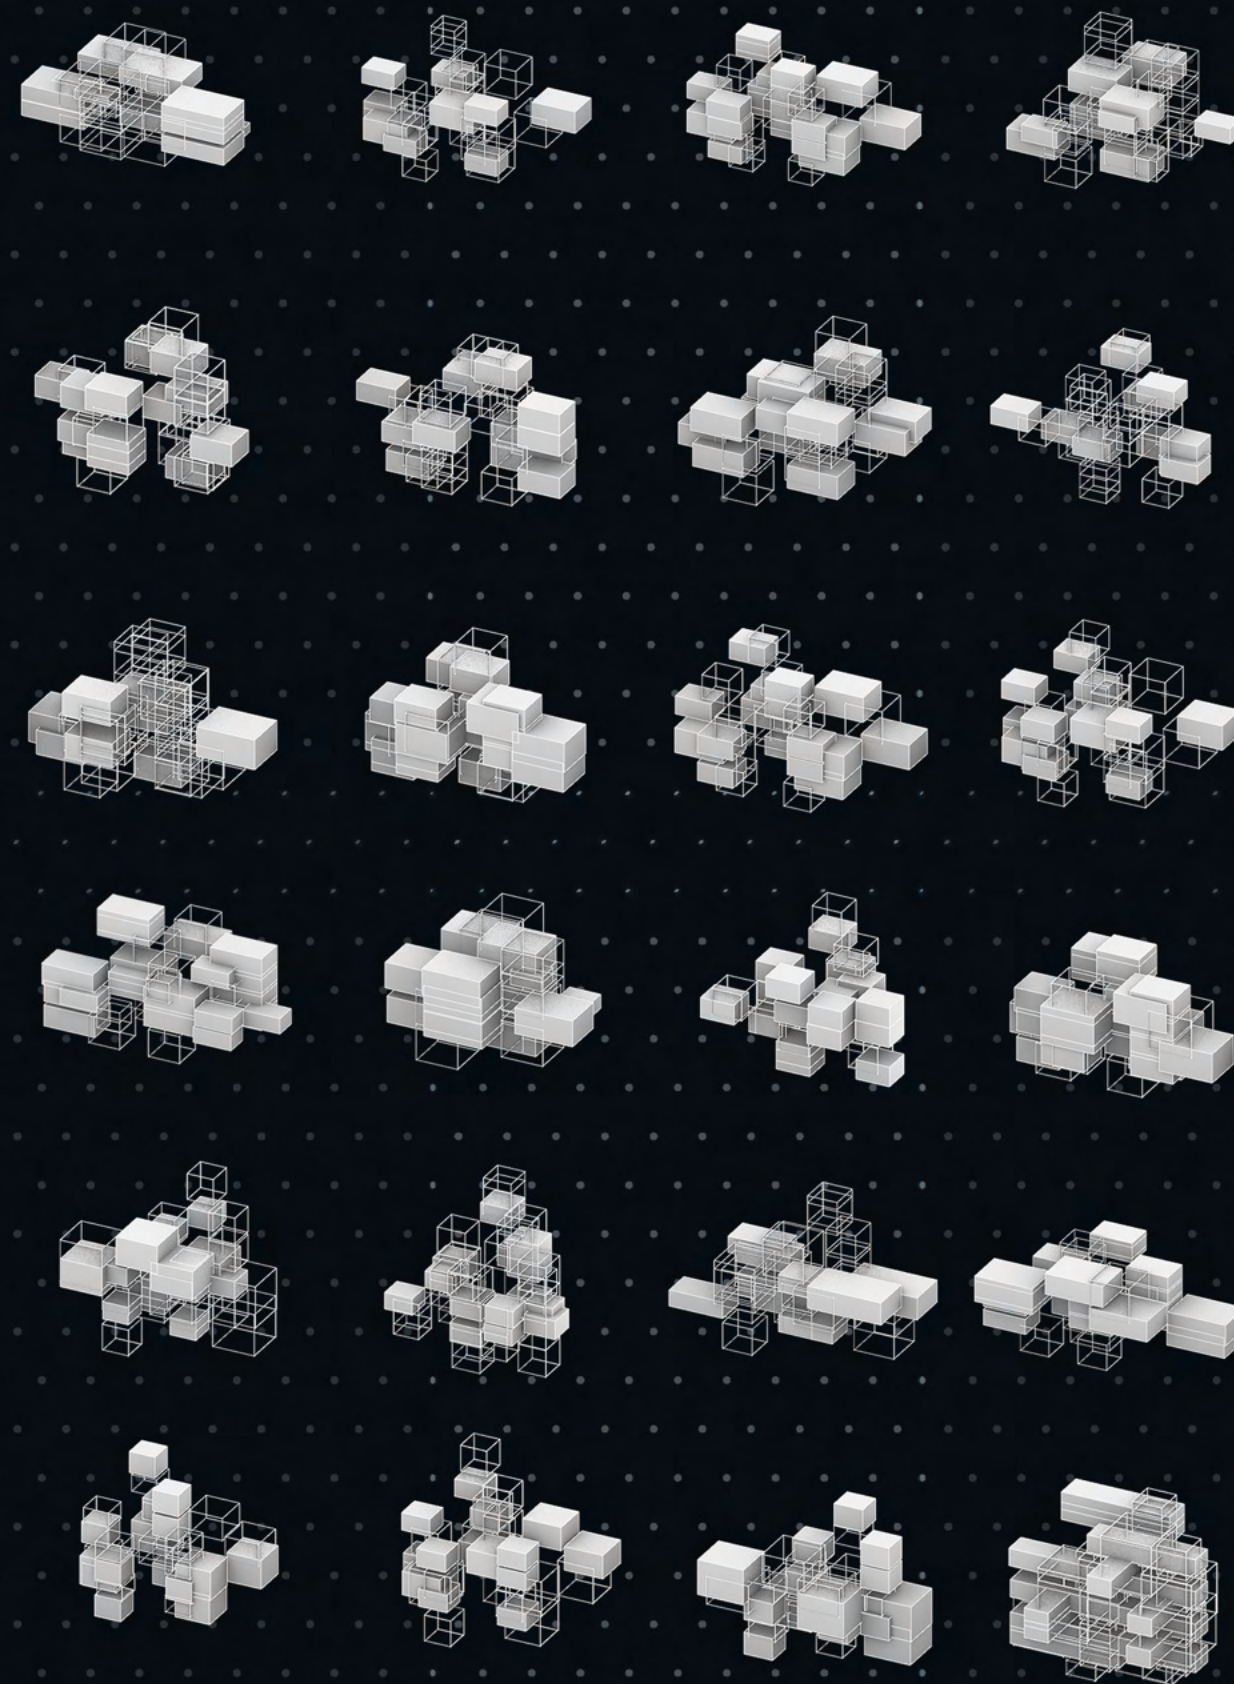

This collection of architectural representations showcases the design and spatial organization of a modern student hotel. The axonometric projection provides a three-dimensional perspective, enabling viewers to grasp the hotel's overall structure without the distortion of perspective. Complementing the axonometric view are eight exploded diagrams that meticulously detail each segment of the hotel.

LOCATION

DUBAI

The housing project include high-rise buildings, mid-rise buildings and low-rise villas located in Dubai near Al Safa park. The project illustrated in a comic style.

The comic art has a timeless appeal, captivating audiences with its bold lines, exaggerated expressions, and dramatic narratives. My housing project takes inspiration from this art form, merging the vivacity of comic panels with modern architectural element. Red, white and black the main colors used.

LOCATION

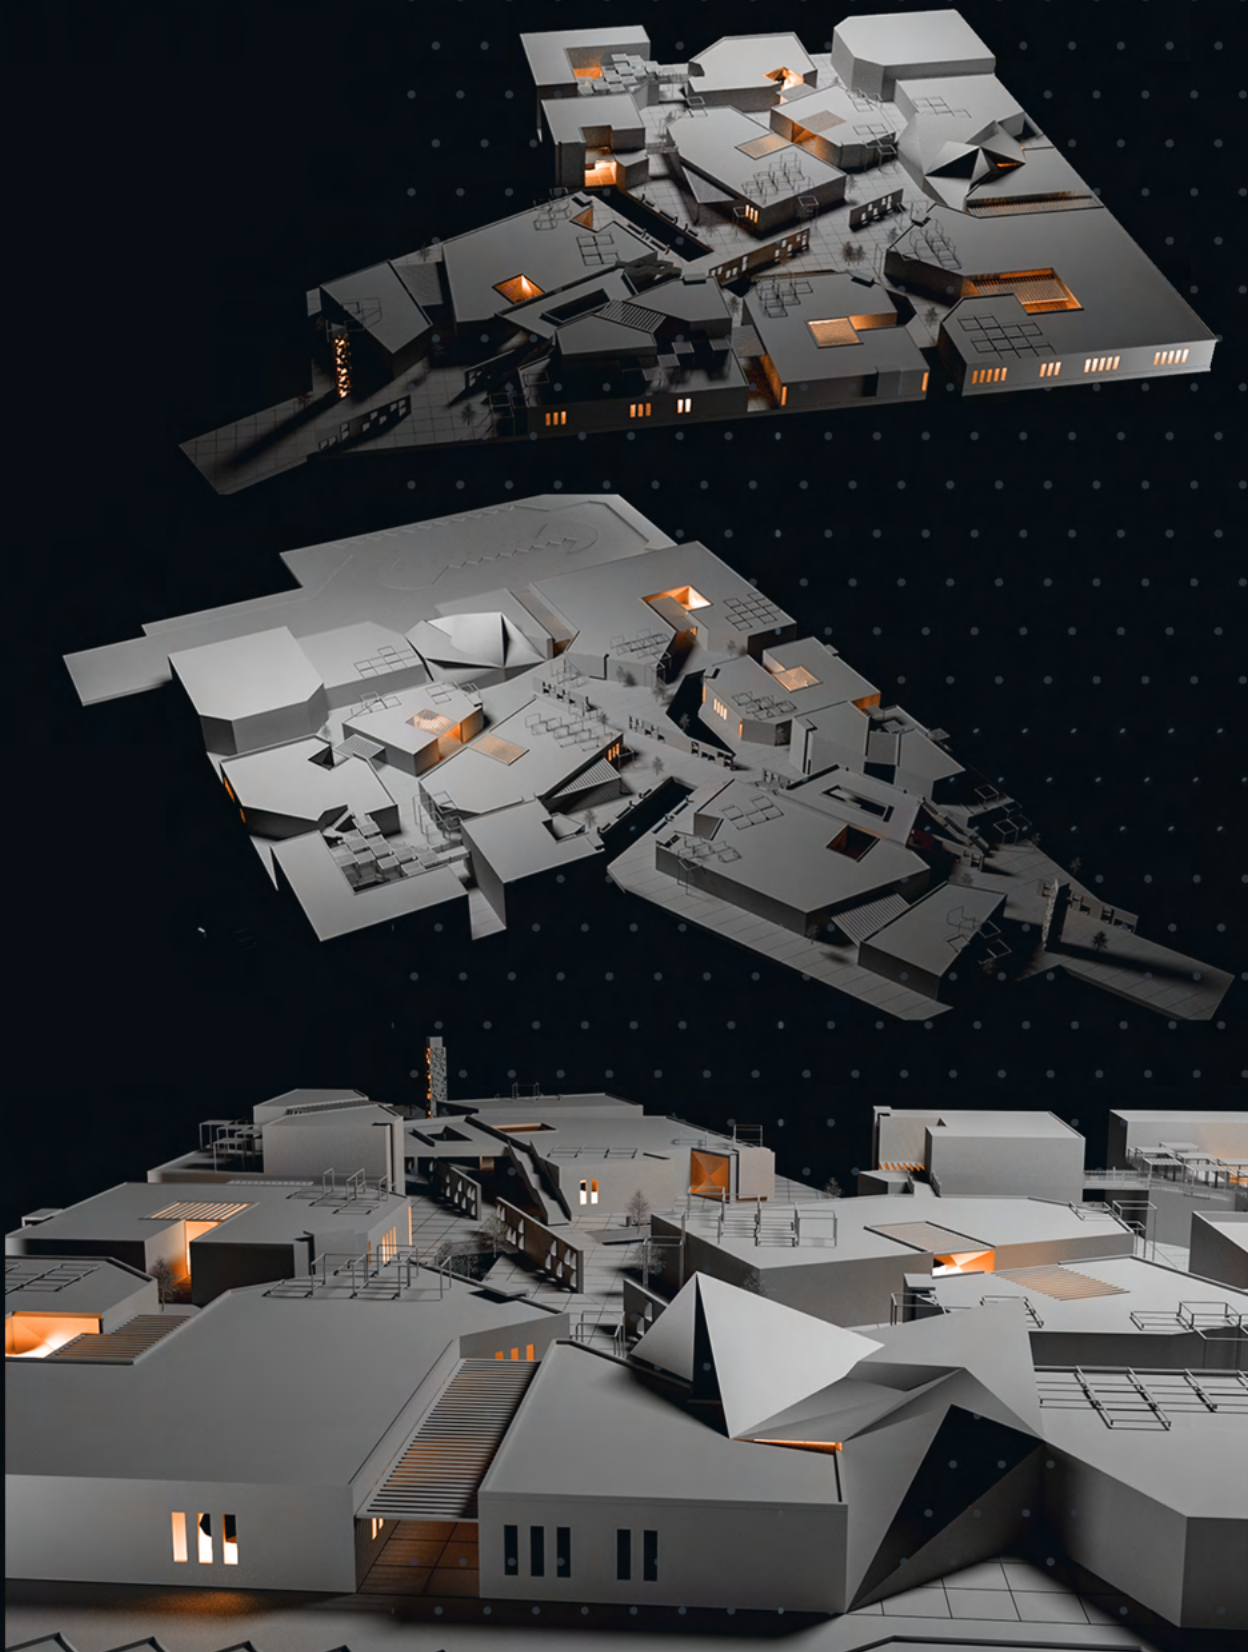

AJMAN

Influenced by the historic charm of Al Bastakiya and the avant-garde design of the Louvre Abu Dhabi, our cultural center is a juxtaposition of ancient motifs and modern architecture. The design emphasizes adaptive reuse, integrating wind towers and mud-brick elements from Al Bastakiya, with the sleek, minimalist aesthetics of the Louvre. The result is an iconic structure that serves as a testament to the evolving architectural narrative of the region.

In the urban project in Ajman, 'Elevated Kinetic Walkways' form the core architectural concept, deeply influenced by the dynamic aerial scenes from Dragon Ball. These walkways represent fluidity and interconnectivity, mirroring the energy and movement inherent in the anime. The design of these structures, with their flowing lines and engaging public spaces, is a direct nod to the series' emphasis on motion and adventure. They integrate seamlessly into the urban fabric, promoting sustainable living and fostering community interactions, while offering a multi-layered experience of the city that resonates with the vitality and imaginative spirit of Dragon Ball, showcasing a commitment to innovative and culturally rich architecture.

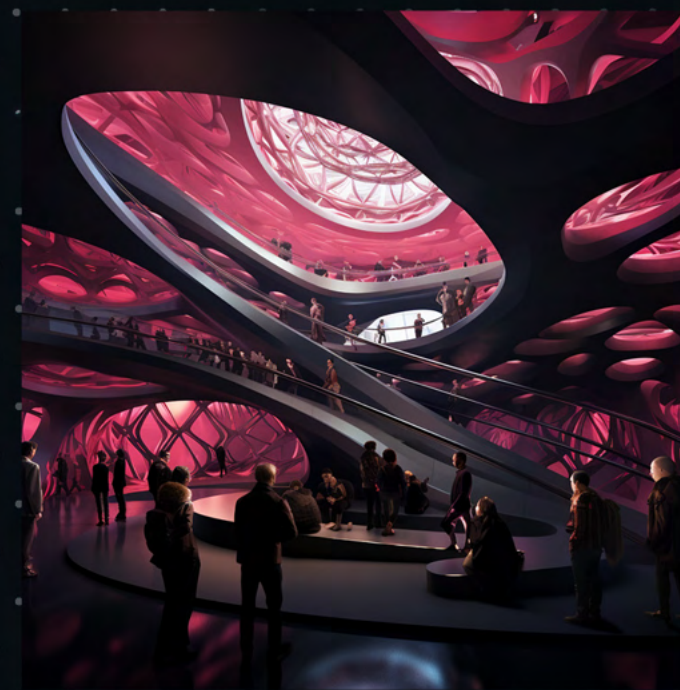

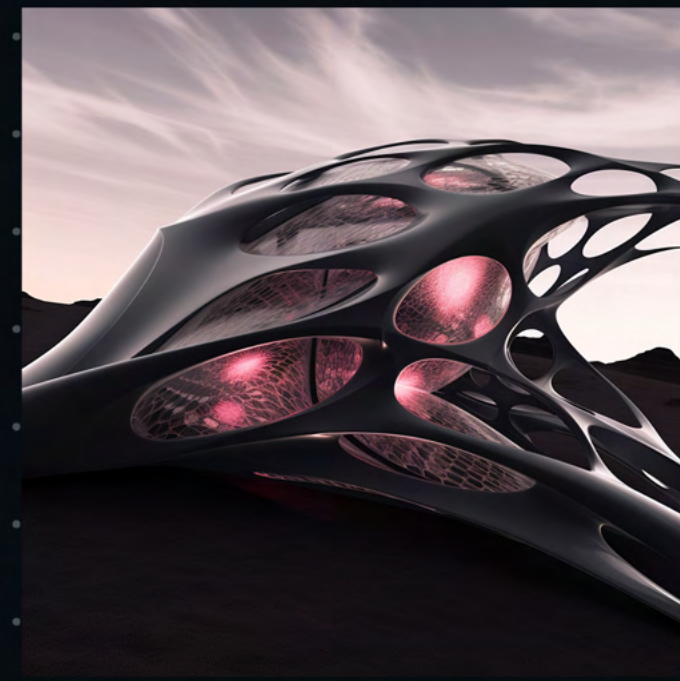

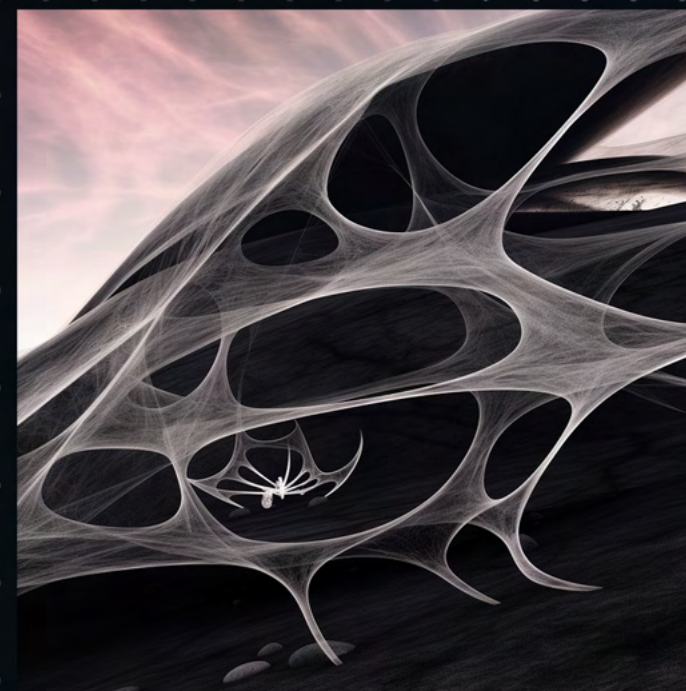

Utilizing the advanced capabilities of Midjourney and AI tools, I have created two architectural forms that are a testament to the fusion of nature with technology. The primary design is biomorphic, echoing the organic curves and seamless forms found in living organisms, and sits effortlessly within a moonscape, reflecting my affinity for harmonizing structure with environment. My secondary concept is inspired by the architectural prowess of spiderwebs, a design that captures their complex network and tensile strength, symbolizing the intersection of natural artistry with human ingenuity.

2023

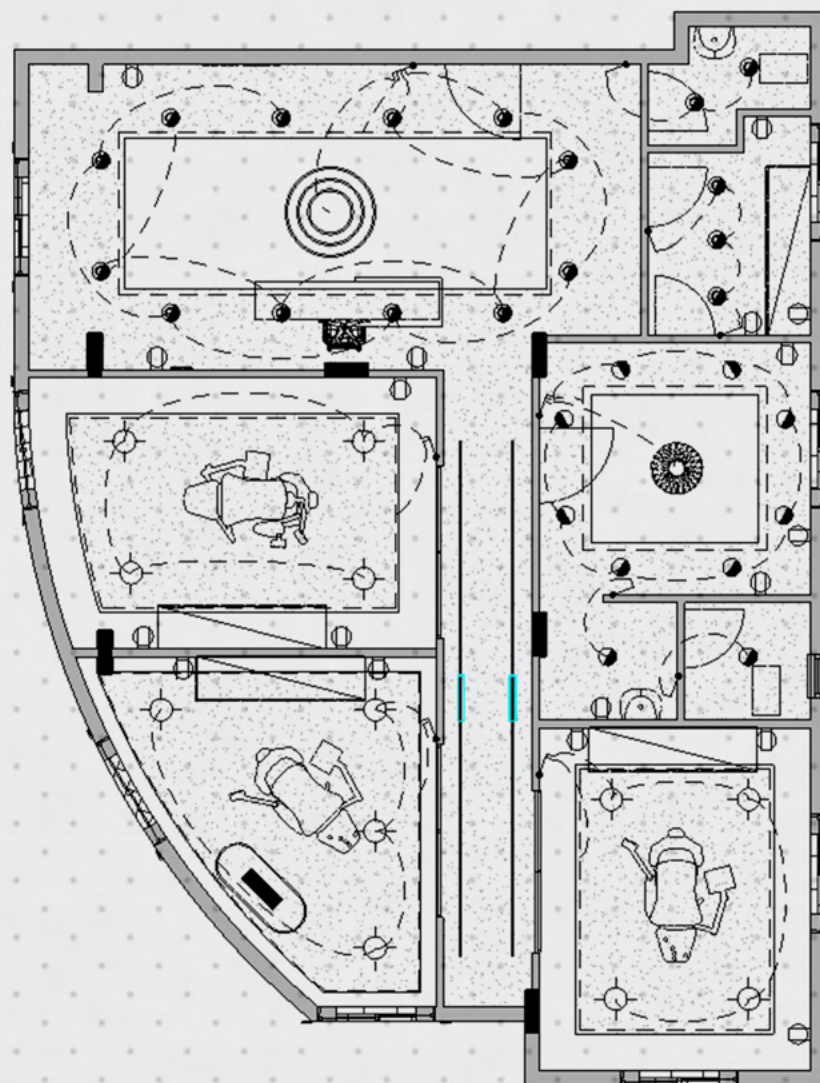

Spiderweb : is a design approach that draws inspiration from the structure and geometry of spiderwebs. It typically involves creating a network or interconnected system of structural elements, similar to the way a spiderweb connects multiple points. The resulting architectural design often features a complex web-like pattern, with interconnected nodes and strands.

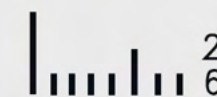

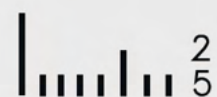

In my fourth year, I took on the comprehensive design of a dental clinic's interior in Palestine, currently in the construction phase. Leveraging Revit, 3D Max, and Corona Renderer, I crafted a space that marries modern design with the calming influence of nature, as seen in the living wall element. I also had the pleasure of designing the clinic's unique logo, further personalizing the space. This project stands as a testament to my holistic approach to design, where functionality, aesthetics, and branding coalesce to enhance the healthcare environment.

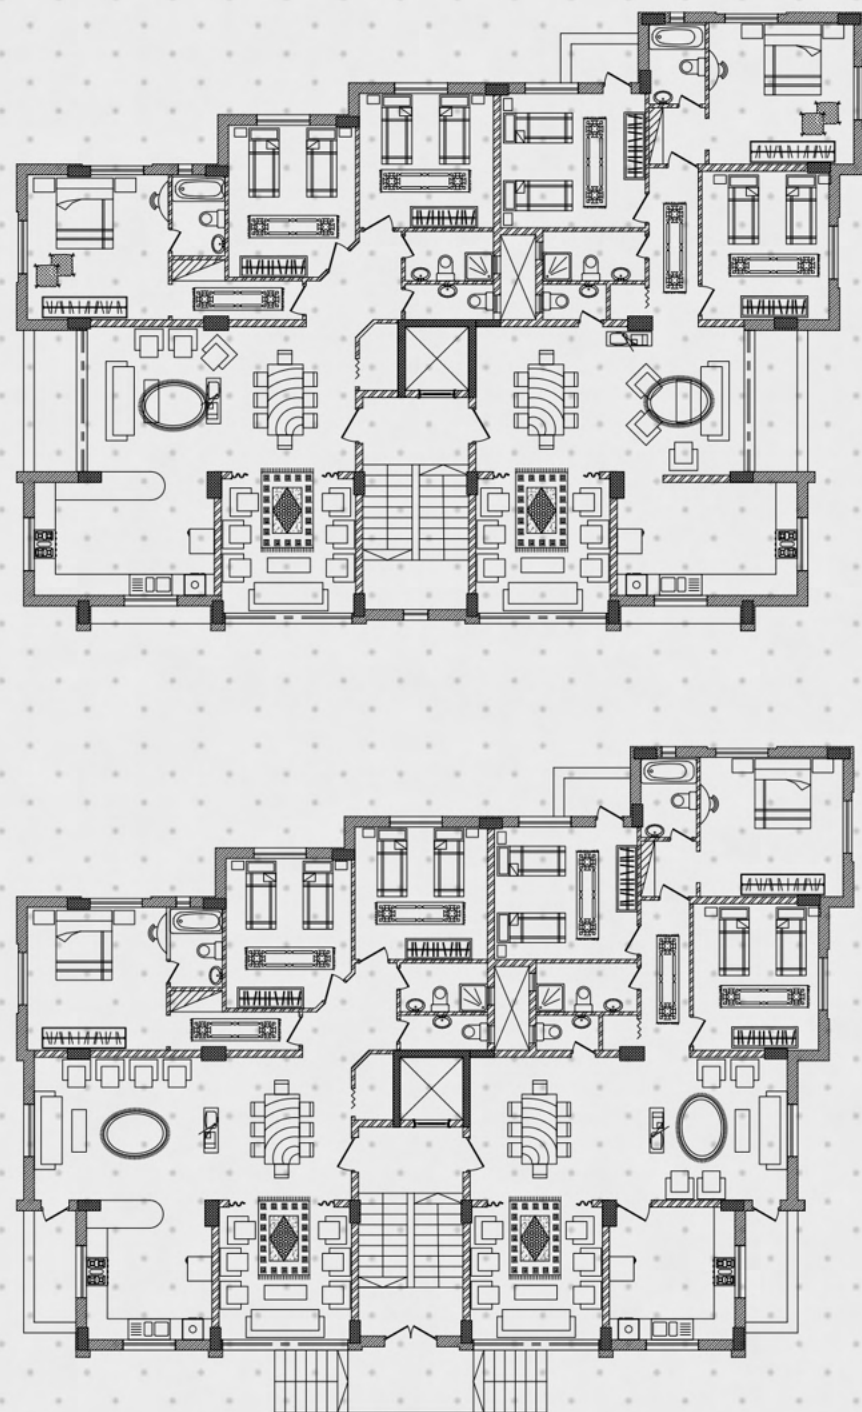

2023

It's my first contribution in the design of a real project, an apartment building consists of 6 floors, each floor has two apartments, in my home city Tulkarm in Palestine. This building is currently under construction and expected to be completed next year.

In addition to my role in design, I was in charge of preparing and rendering 3d shots.

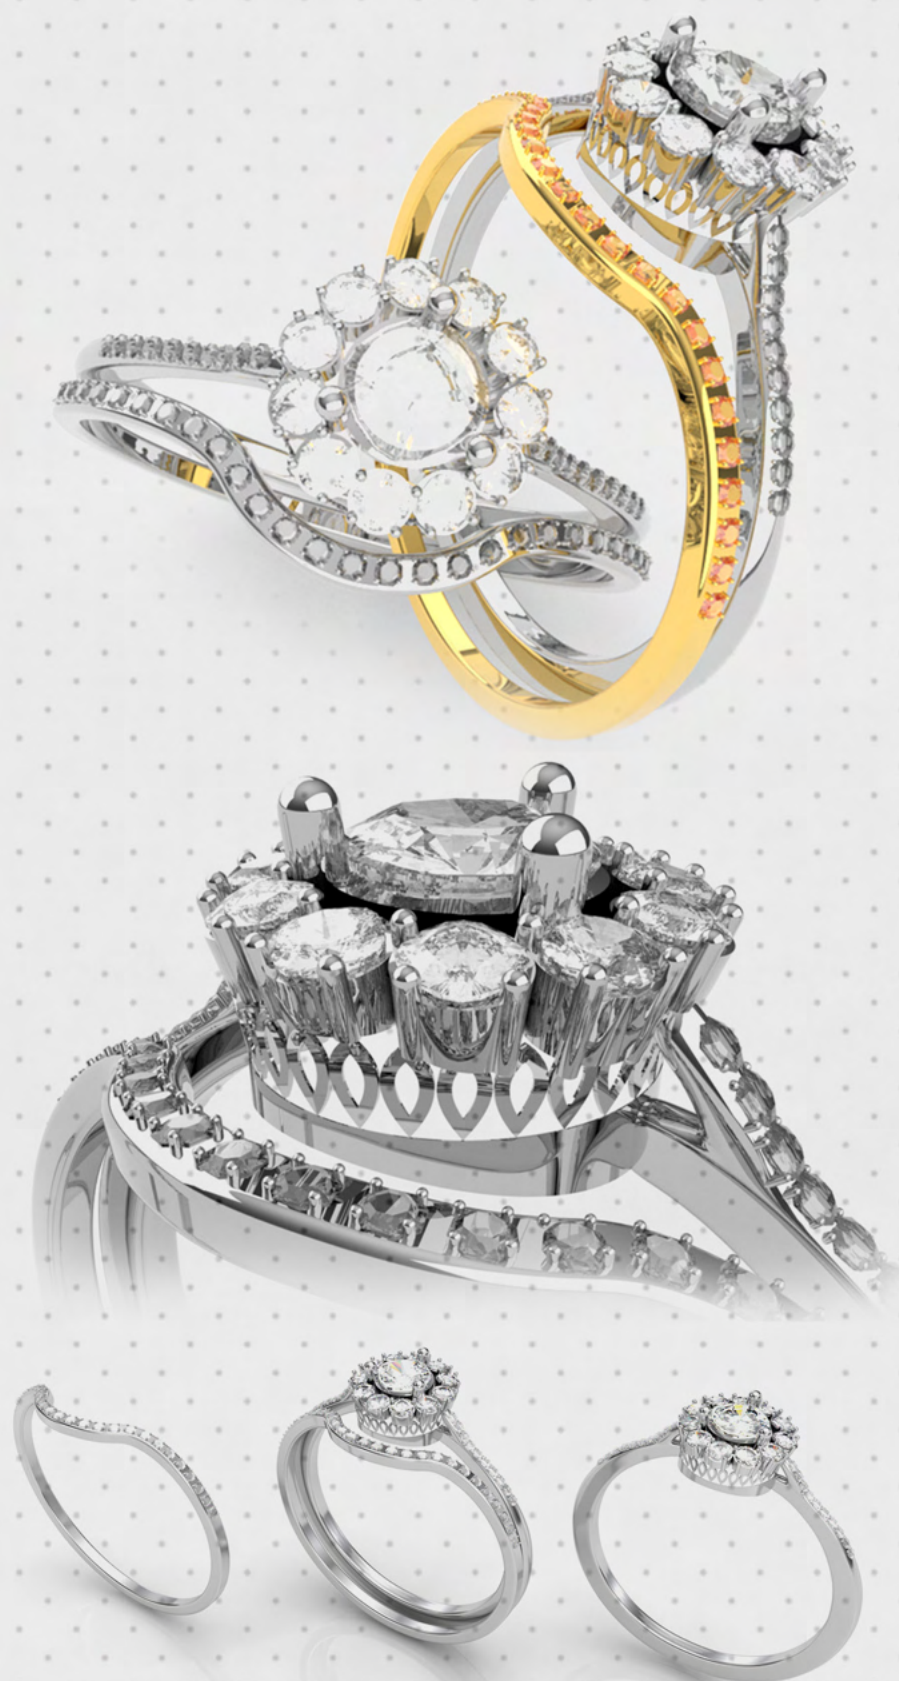

2023

In the summer of my third year, I delved into the intricacies of jewelry design, creating a series of rings with Rhino. Each piece, rendered to perfection with Keyshot, boasts meticulously aligned stones on elegantly curved bands, exemplifying my commitment to detail and the pursuit of simplicity as the ultimate sophistication in design.
